

Dear Hiring Team,

I am excited to apply for the Data Analyst Intern position at Gabriel AI. As a Master of Science in Information Management student at the University of Illinois Urbana-Champaign with professional experience in data analytics, dashboard development, SQL, and data pipeline validation, I am eager to contribute to your mission of using data-driven insights to improve customer onboarding and product growth.

In my recent Data Analyst roles, I built interactive dashboards in Power BI and Looker Studio, segmented performance metrics by user cohorts and acquisition sources, and developed SQL-based validation processes to identify tracking gaps and improve data quality. At Swift Mobil Software Solutions, I created dashboards that improved visibility into operational KPIs while reducing reporting effort by 40%. I also leveraged Python, SQL, and large-scale datasets to uncover trends, detect anomalies, and support data-driven decision making.

Beyond analytics, my research work at the University of Illinois has strengthened my ability to work with complex data pipelines and production systems. I have designed PostgreSQL architectures, developed scalable Python-based data workflows, and collaborated with cross-functional teams to ensure reliable data collection and analysis. These experiences have given me a strong understanding of data integrity, event tracking, API-generated data, and the importance of building trustworthy reporting systems.

What particularly excites me about Gabriel AI is the opportunity to measure and optimize a real-world AI-powered customer journey. I enjoy asking "why" behind the numbers, translating ambiguous business questions into structured analyses, and communicating insights that drive action. The chance to work closely with Growth, Product, and Engineering teams in a startup environment is exactly the kind of high-impact experience I am seeking.

I am confident that my background in SQL, Python, dashboard development, KPI reporting, and analytical problem solving would allow me to contribute quickly to Gabriel AI's onboarding analytics initiatives. I would welcome the opportunity to discuss how my skills and experiences can support your team.

Thank you for your time and consideration. I look forward to hearing from you.

Sincerely,

Malhar Gudekar M.S. Information Management University of Illinois Urbana-Champaign
