EDUCATION

University of Illinois Urbana Champaign

August 2024 - May 2026

Master of Science, Information Management

GPA: 3.8/4

• Coursework: Web Programming, Machine Learning & Cloud, Information Management, Information Consulting, Methods of Data Science

University of Mumbai

June 2019 - May 2023

Bachelor of Engineering, Computer Science

GPA: 9.25/10

• Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Object-Oriented Programming, Machine Learning, NLP

SKILLS

• **Languages:** Python, SQL, Java(leetcode), C++(leetcode)

• **Data Engineering:** ETL/ELT Pipelines, Data Modeling, Snowflake, PySpark, Workflow Orchestration (Airflow, Step Functions, AWS Glue)

• **Cloud & Tools:** AWS (S3, EC2, EKS), PostgreSQL, Neo4j, Git, CI/CD, Docker

WORK EXPERIENCE

University of Illinois Urbana Champaign

May 2025 - Present

Research Assistant - iSchool

Champaign, USA

- Built and maintained **AWS-based scalable data pipelines** to ingest high-volume wearable data for 100+ users, enabling distributed storage in **S3** and downstream analytics consumption
- Designed and optimized SQL-based data models and warehouse tables in PostgreSQL, applying indexing and query tuning to improve performance by 38%, enabling reliable high-speed data access for analytics and reporting pipelines
- Implemented **workflow orchestration using AWS Step Functions** and monitoring for real-time streaming pipelines, adding data quality checks, logging, retries, and failure handling to ensure reliability

Research Assistant - CHI AI in Infodemic Management

January 2025 - May 2025

- Designed and deployed **scalable ELT pipelines** in **Python** for high-volume social media datasets in distributed environments, reducing processing latency by 41%
- Built distributed real-time ingestion pipelines using **Kafka** and **Neo4j**, enabling streaming data processing, transformation, and graph-based analytics at scale
- Applied **distributed data processing and big data principles** to handle large-scale streaming data and ensure consistent data availability

Business Intelligence Group

August 2025 - December 2025

Technical Consultant

Champaign, USA

- Built and deployed scalable greenfield data processing applications using FastAPI, PostgreSQL, and optimized storage layers, supporting large-scale analytics and business-critical downstream reporting workflows
- Designed and deployed scalable ELT pipelines in Python and Pandas for high-volume datasets in distributed environments, reducing processing latency by 41% and ensuring reliable data delivery for downstream analytics workflows
- Developed backend services and used **Git-based CI/CD workflows** to enable reliable deployment and real-time querying across distributed and high-availability environments

Swift Mobil Software Solutions Provider

July 2023 - October 2023

Data Analyst

Mumbai, IN

- Built **data pipelines** feeding **Power BI dashboards** for logistics KPIs, reducing reporting time by **40%** and improving data availability for business decision-making
- Processed large-scale datasets using **Python** and **PySpark distributed processing**, implementing transformations and aggregations for performance monitoring
- Developed **SQL queries** to validate, reconcile, and analyze operational data, improving data quality and speeding root-cause analysis by **26%**

Pscope Technologies Pvt. Ltd.

January 2023 - June 2023

Data Analyst

Mumbai, IN

- Built and maintained SQL-based data pipelines and warehouse models using PostgreSQL and Snowflake-compatible schemas, writing complex joins and aggregations to deliver analytics-ready datasets for business decision-making
- Automated **data transformation workflows** using VBA, implementing validation checks, error handling, and scheduling logic to streamline large-scale data processing and cut reporting time by **42%**

Stu/Dio at Illinois

August 2025 - Present

Project Manager

Champaign, USA

- Consolidated and analyzed 500+ user feedback signals and gameplay telemetry records, creating structured datasets that accelerated feature prioritization by 35%
- Managed **Agile workflows** using JIRA, tracking delivery, QA issues, and sprint progress to ensure timely and reliable releases

PROJECTS

Scalable ML System for Customer Risk Prediction

March 2025

UIUC Hackathon

- Built an end-to-end quantitative data pipeline using Python, Pandas, and LightGBM to process large-scale financial time-series transaction data, including ingestion, transformation, feature engineering, and predictive model integration
- Designed and implemented scalable ETL and feature engineering pipelines for financial time-series data, capturing behavioral trends and temporal patterns such as rolling averages and spending frequency to improve quantitative model performance
- Developed a data-driven decision framework incorporating model outputs and risk thresholds to improve prediction precision by 20%, enabling scalable credit risk analytics aligned with investment decision workflows
